

Frequently Asked Questions about the BS Brace

Some patients, particularly those who have had previous surgery or those who have severe nail deformities, may need to progress to other treatments.

Is BS Brace ingrown nail treatment new?	BS Brace is an ingrown toenail treatment that has been used successfully worldwide in over 40 countries for 30 years. With its advanced developed technology and high safety system, BS brace is the solution to treat people who suffer from ingrown toenails.
How long does it take to feel the effects of Brace?	The effects are different depending on the individual due to the shape and thickness of the nail. Most patients begin to feel immediate relief usually within 30 minutes. However patients suffering from severely involuted, thick nails will feel the effects within approximately 3 days.
How does the tension of the BS Brace work?	The correcting forces work for about four weeks. After this time, the BS Brace can be removed from the nail and a new one can be affixed to the nail plate.
Is there a possibility of allergies with the BS Brace ingrown toenail kit?	The Brace is not attached to the skin so highly unlikely. In 30 years of the BS Brace being used there have not been any reported allergies.
Are diabetic patients able to use the BS Brace	Yes! BS Brace is the ideal treatment for patients with diabetes, because BS Brace does not require any substance to be inserted under the nail folds at the edge.
If the nail is only curved on one side of the nail, does the BS Brace still work?	Yes! Even if the curve is only on one side of the nail, the brace will be mounted from side to side. Because the BS straightening system works the central part of the nail by pulling both ends of the plate. The tension of the brace can be reduced slightly as needed on other side of the nail which is not curved.
After the BS Brace is mounted, how long do you have to avoid water for?	We recommend waiting 24 hours to make sure the brace is completely adhered to the nail before getting it wet. This includes showering.
Are there any restrictions once BS Brace is applied?	No! You can go back to doing general daily activities and will be able to resume your lifestyle!
How many times do I need the Brace applied?	Depending on the patient's conditions, more than one application may be required as a general treatment plan. As the effected nail grows, the brace will be carried further towards the nail edge, thus moving brace from original position, rendering it less effective. Which can mean possibly 1-4 applications before the issue is resolved 100%.
How much is the cost of BS Brace treatment?	The application of the BS Brace includes the cost of one Brace and is \$50.00. Additional Braces may be applied at \$40.00. Some extended health providers will reimburse patients for the cost of the brace while others do not. Please check with your insurance provider.
